Emerald Ash Borer 2006 Survey Report

Emerald ash borer (*Agrilus planipennis*), first discovered in Michigan in 2002, poses a significant threat to ash species in North America. Since early detection of infestations is vital to eradication and management efforts, the USDA Forest Service Forest Health Protection (FHP) unit, along with state and university cooperators, conducted visual and trap tree detection surveys in seven upper Midwest states for the exotic pest. Forest Service cost-share funding was used by cooperators in Iowa, Illinois, Indiana, Michigan, Minnesota, and Wisconsin to conduct surveys on federal, state, county and private properties. FHP staff conducted surveys on federal properties in Iowa, Minnesota, Missouri, and Wisconsin.

The following report summarizes 2006 Forest Service-sponsored visual and trap tree surveys. For each state, results of trap trees peeled in 2006 by FHP and state and university cooperators are provided. Participating states also conducted or are currently conducting additional EAB surveys financed by state or USDA-APHIS funds. Results from additional surveys have been made available for this report from Indiana, Minnesota, Missouri, and Wisconsin, and are included. However, significant efforts, such as the extensive USDA-APHIS funded surveys in Michigan, northeast Illinois, and southeast Wisconsin are not included in this report. For more information regarding further EAB surveys, appropriate state contact information is provided.

Summary of surveys by state

State	Visual survey sites	Trap trees established
Illinois	9	319
Indiana	-	2,153
Iowa	102	58
Michigan	-	774
Minnesota	27	102
Missouri	100	-
Wisconsin	241	287

Emerald Ash Borer 2006 Trap Tree and Visual Survey Locations*

* Map does not include APHIS and State Department of Agriculture-sponsored survey locations for Indiana, Illinois, Wisconsin, and Michigan. Additional state-funded survey locations are included for Minnesota, Missouri, and Wisconsin.

Illinois

Emerald Ash Borer 2006 Survey Report

In 2006, The Morton Arboretum and the University of Illinois/Illinois Natural History Survey conducted trap tree surveys on sites in northern and southern Illinois, respectively, with the assistance of Forest Service cost-share funding. A total of 319 EAB trap trees were set up, with the focus on recreation areas on federal, state, county, and private lands across the state. In addition to trap tree surveys, the University of Illinois also conducted visual surveys at nine sites. Emerald ash borer was detected in three trap trees in Kane County in the northeast portion of the state. The first detection of EAB in Illinois was discovered in Kane County in mid-summer by USDA-APHIS. Not included in this report is an extensive trap tree survey conducted in northeast Illinois by USDA-AHPIS.

Emerald Ash Borer 2006 Illinois Trap Tree and Visual Survey Locations*

* Map does not include USDA APHIS-sponsored survey locations.

Indiana

Emerald Ash Borer 2006 Survey Report

Forest Service funding provided to the Indiana Department of Natural Resources was used to conduct trap tree surveys focusing on the northeast corner of the state. In conjunction with an additional trap tree survey program funded by USDA-APHIS, IDNR peeled approximately 2,143 trees statewide in 2006. Emerald ash borer was detected on four peeled trap trees. Two of these trees were located in counties where EAB had not previously been detected, DeKalb County and Porter County. The other two positive trees were located in counties with known infestations, Steuben County and White County.

Iowa

Emerald Ash Borer 2006 Survey Report

The Iowa Department of Natural Resources, in partnership with Iowa State University, used Forest Service funding to conduct visual and trap tree surveys. IDNR and ISU trap tree surveys focused on high risk federal, state, and county campgrounds, while visual surveys focused on state and county campgrounds. FHP surveyors focused visual surveys on federal sites throughout the state. In 2006, a total 102 sites were visually surveyed and 58 trap trees were established in 18 sites. Emerald ash borer was not detected in Iowa.

2006 Iowa Visual and Trap Tree Survey Locations

Michigan

Emerald Ash Borer 2006 Survey Report

Forest Service funding provided to Michigan Tech University was used in conducting trap tree surveys throughout Upper and Lower Michigan. Survey sites focused on high risk recreation areas where firewood introduction is likely. These sites were largely on federal properties, National Forests and National Parks, and state properties, State Parks and State Forests. In 2006, a total of 263 trap trees were cut and peeled and 511 established trap trees were left standing for an additional season. Emerald ash borer presence was detected on five of the peeled trees in counties with known EAB infestations. Not included in this report is an extensive trap tree survey conducted in Upper and Lower Michigan by USDA-APHIS and the Michigan Department of Agriculture.

Minnesota

Emerald Ash Borer 2006 Survey Report

Forest Service funding provided to the Minnesota Department of Agriculture was used in conducting surveys of 48 trap trees in and around the Minneapolis-Saint Paul and Rochester metropolitan areas. FHP personnel also established trap trees on three sites on the Chippewa and Superior National Forests; these trees remain standing for the 2007 season. FHP personnel also conducted visual surveys on 23 federal sites throughout the state. An additional 44 trap trees were surveyed using state funds by the Minnesota Department of Natural Resources. In 2006, emerald ash borer was not detected in Minnesota.

Emerald Ash Borer

2006 Minnesota Trap Tree and Visual Survey Locations*

*Map includes state-funded trap tree survey locations.

Missouri

Emerald Ash Borer 2006 Survey Report

FHP personnel conducted visual surveys on federally-owned properties throughout the state with focus on recreation areas, specifically campgrounds, where firewood introduction is likely. In addition, the Missouri Department of Conservation along with the Missouri Department of Agriculture conducted state-funded visual surveys focusing on selected state parks, private campgrounds, and urban sites. A total of 100 sites were surveyed in 2006. Emerald ash borer was not detected in Missouri.

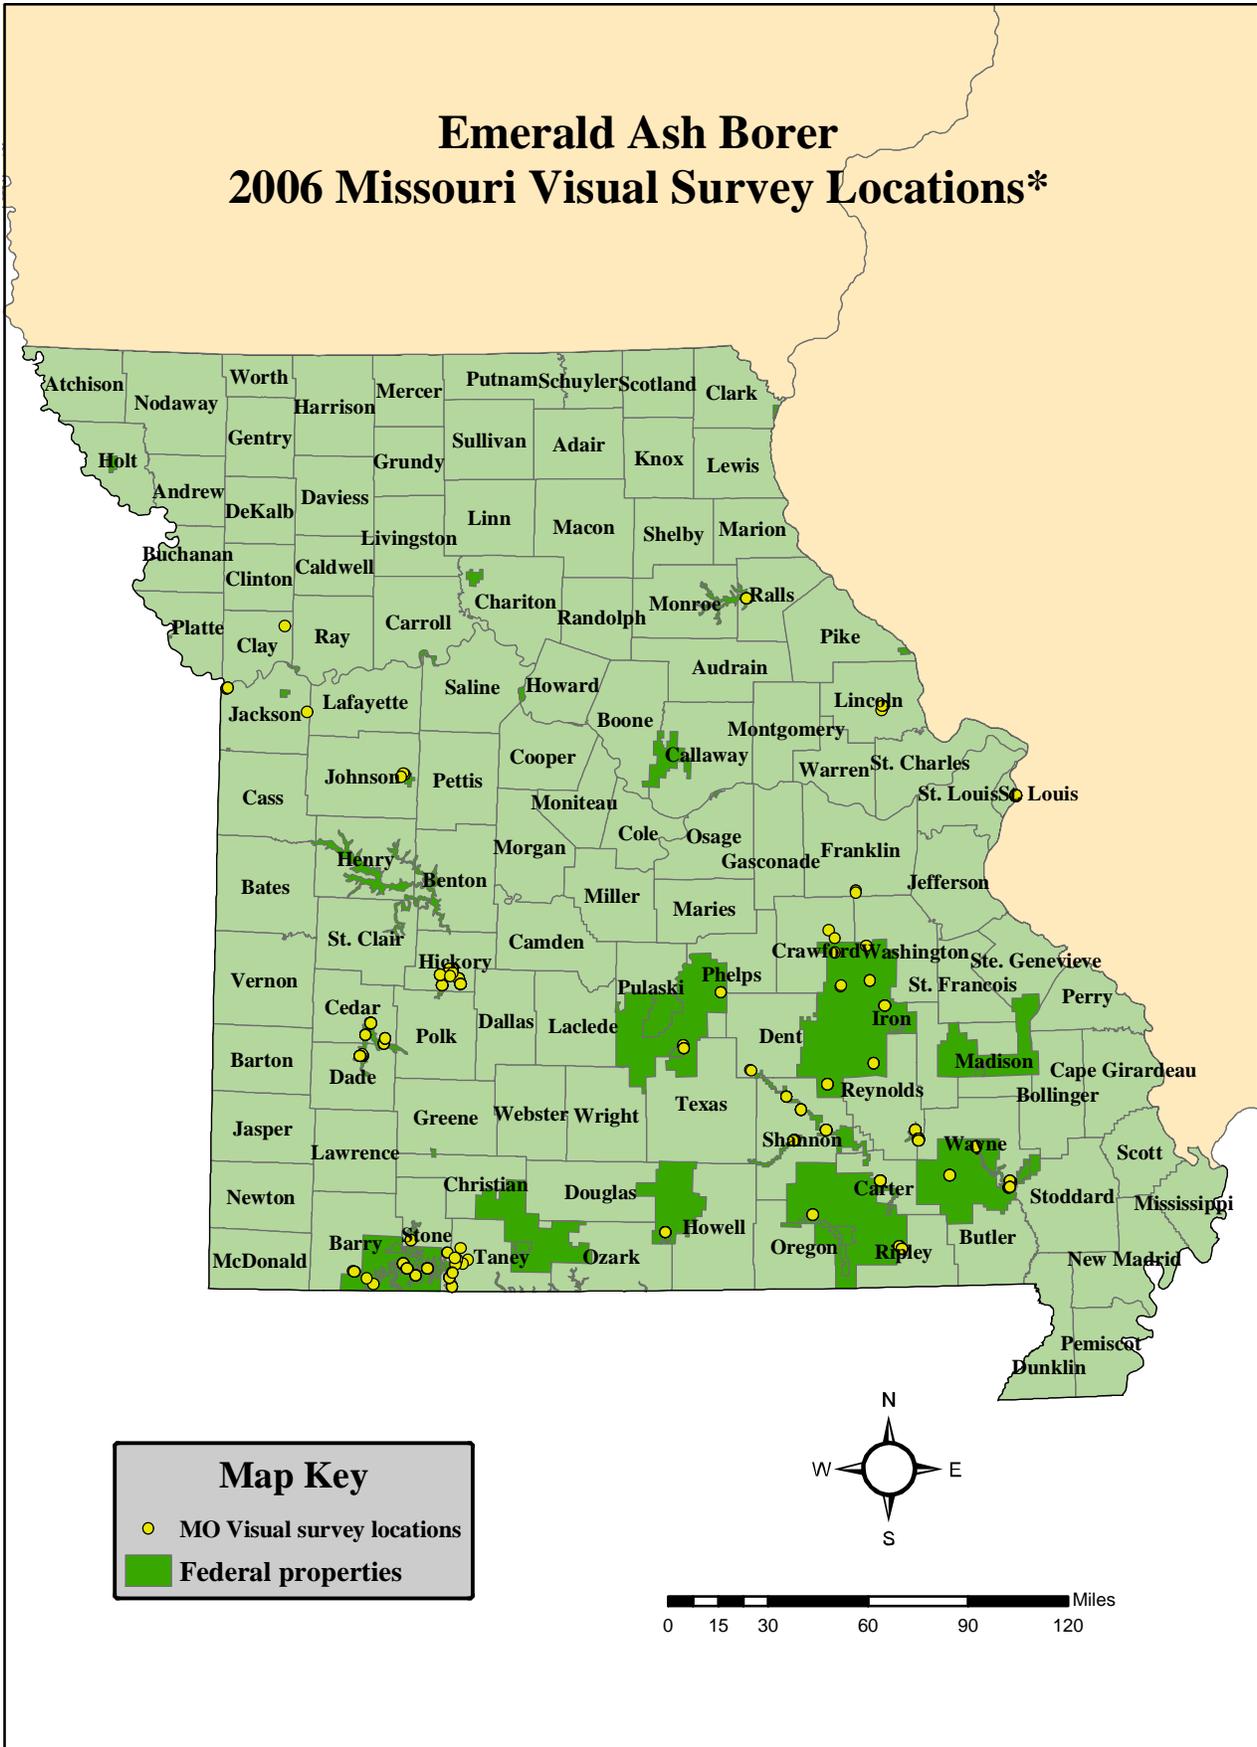

For additional information regarding Missouri survey data, please contact:

Wisconsin

Emerald Ash Borer 2006 Survey Report

Forest Service funding provided to the Wisconsin Department of Natural Resources was used to conduct visual surveys on state, county, and private properties throughout the state. Along with visual surveys conducted by FHP personnel on federal properties, a total of 241 sites were visually surveyed in Wisconsin. FS funding provided to Michigan Tech University was used to conduct trap tree surveys in sites on the Chequamegon-Nicolet National Forest in northern Wisconsin. In addition, state funding provided to Michigan Tech University was used to conduct trap tree surveys on high risk state park and state forest campgrounds. Not included in this report is an extensive trap tree and destructive sampling survey conducted in southeast Wisconsin by USDA-APHIS and the Wisconsin Department of Agriculture in late 2006. Emerald ash borer was not detected in Wisconsin.
