NORTHEASTERN AREA
State and Private Forestry

Preface

This guide is designed to serve as a source of marketing methods and strategies which manufacturers and entrepreneurs can refer to when the need arises. Because the array of secondary-processed wood products and markets is so broad, some methods and strategies will apply to your firm directly, others will not. Keep in mind that this guide was developed to provide guidance for both manufacturers of consumer products and industrial products.

The guide is divided into two main parts. The first nine chapters pertain to marketing concepts, quick marketing research methods, ways to locate customers, exporting, and financing. The second part, the appendixes, provides valuable sources of additional information. The appendixes are comprised of lists of various forest products directories, state agencies that provide assistance to manufacturers, forest products organizations and trade shows on a state-by-state basis for the 20 northeastern states. A wealth of marketing information is contained within this guide; it is up to you to use it to your advantage.

Acknowledgments

Much effort has gone into the development of this guide. As with most documents of this nature, many individuals and organizations contributed information and advice. In particular, I would like to thank the Forest Products Utilization & Marketing Supervisors in the 20 northeastern states for their help and assistance in developing this guide, especially the appendixes. Additionally, I would like to thank the reviewers. Their suggestions and comments greatly improved the quality of this document. Lastly, I want to express my sincere appreciation to the Forest Resources Management staff in Morgantown, WV, for their assistance and support.

Table of Contents

I.	INTRODUCTION	1
II.	MARKETING	2
III.	4 P'S OF MARKETING	5
	1. Product(s)	5
	2. Promotion.	6
	3. Price	9

J. Exporting Assistance - State Agencies	78
K. Financial Assistance - State Agencies	83

I. INTRODUCTION

Marketing is the backbone of most profitable wood products companies. But marketing, itself, is a concept which many manufacturers and entrepreneurs struggle with daily. Consequently, this guide is designed to assist wood products manufacturers and entrepreneurs with their marketing needs. The guide can be used for exploring, analyzing, and tackling a variety of markets, or it can be used as insight and food-for-thought about the marketing of wood products.

Many of the concepts contained in this publication are used successfully by wood products manufacturers and entrepreneurs. They are offered to serve as a guide, not as the gospel. What may work for one manufacturer, may not work for another. The key to successful marketing is identifying the particular strategies that will make your company more competitive and profitable.

This guide focuses on the marketing of secondary-processed/value-added products, which, in the context of this guide, are products derived from kiln-dried lumber. These products range from a simple surfacing of rough-sawn, dried lumber, to the manufacture of high-quality furniture. Even though there are many steps separating these two examples, the simple surfacing of rough lumber is a value-added process. Because hardwoods predominate the northeastern United States, most examples in this guide pertain to hardwood products.

Wood products are divided into two major end-use market classifications: consumer and industrial. Examples of products manufactured for the consumer market are furniture, flooring, paneling, architectural millwork, doors, and kitchen cabinets. Such products are generally found in homes, businesses, and institutions. Examples of products manufactured for the industrial market are dimension, furniture parts, railroad ties, pallets, and containers. Normally, these products are not used directly by the general public or the average consumer. Marketing examples for both the consumer and industrial market are included in the guide.

II. MARKETING

An executive vice president of a major forest products company once defined marketing as: "The process of moving goods from the producer to the consumer. It starts with finding out what the consumers want or need, and then assessing whether the product can be made and sold at a profit."

This approach to marketing proved to be extremely effective for the company involved. Identifying customer needs is a key factor for a successful business. In today's society, the most successful companies are the ones with the closest ties to their customers. They listen to what their customers say, and react accordingly.

In general, the final consumers of many secondary-processed wood products are homeowners. They give an accurate indication of consumer needs and preferences. There are ample ways for a firm to gain insight into products sought by these household consumers.

Photo by Ed Cesa

Homeowners' tastes and preferences affect the demand for secondary-processed wood products.

For example, visiting recently-completed residential homes or subscribing to home-type magazines that cover current trends or consumer preferences are two methods. Magazines such as *Fine Home Building*, *Home*, *Country Decorating Ideas*, *Country Living*, *Remodeling Ideas*, and *Victorian Homes* are widely distributed. Most bookstores carry a variety of these types of magazines. For manufacturers of dimension and component parts, trade journals such as *Wood & Wood Products*, *Furniture Design & Manufacturing*, and *Cabinet Manufacturing & Fabricating* provide insight about demand and markets.

Consumer tastes and preferences vary by locale or region. The more aware you are of these preferences, the easier it will be to fit or alter your product line to meet consumer demand. On a local basis, visiting real estate open houses, home shows, and professional contractors and remodelers provides insight into what products, styles, and colors are in demand.

Consumer tastes and preferences come and go. For example, in the 1950's, hardwood flooring was the prime flooring material used in residential homes. However, with the development of synthetic carpets and vinyl sheet flooring, hardwood flooring usage declined. Recently, trends have changed. Hardwood flooring is once again being used in new residential homes because it increases resale value and desirability. The industry is also successfully promoting a complementary wall and ceiling product.

Photo by Ed Cesa

Complementary hardwood flooring products like wall and ceiling paneling have helped boost sales of the hardwood flooring industry.

III. THE 4 P'S OF MARKETING

Successful marketing incorporates four key factors: product, promotion, price, and place (distribution). These factors are referred to as the 4 P's of marketing. Using the 4 P's in the right combination allows a manufacturer to satisfy his customers' needs and wants while maintaining a profitable business.

1. Product(s)

Products are physical objects or services that satisfy consumer needs and wants. Anything derived from wood can be considered a product. Two important wood product classifications are: commodity and specialty. Wood commodities are products such as 2 x 4's, 2 x 6's, hardwood lumber, softwood lumber, structural plywood, and oriented strand board. In other words, wood commodities are indistinguishable products that are manufactured by many companies. The purchase of these products is usually dictated by price. For example, consider that a customer is given the choice of buying a construction grade 2 x 4 manufactured from pine harvested in State A versus a construction grade 2 x 4 manufactured from pine harvested in State B. If the 2 x 4's look similar, but the price for the State A 2 x 4 is less than the price for the State B 2 x 4, the customer will purchase the State A 2 x 4. Why? Because 2 x 4's of the same structural grade have basically the same mechanical and structural properties. Consequently, there is no reason to buy the more expensive 2 x 4.

Specialty products are products that are unique in one way or another and have few substitutes. Consequently, they are not as price-sensitive as commodity products. For example, consumers are able to purchase 2 x 4's from a variety of building supply outlets and home center stores, but they cannot easily obtain clear-four-sides, surfaced-four-sides walnut boards from these sources. Consequently, consumers needing surfaced walnut boards for a weekend woodworking project are usually willing to pay a high price for these "specialty items" if they are able to find them at all. This is

because there are few, if any, desirable alternatives, unlike the situation described for 2 x 4's. Typically, sales of specialty products are less affected by cyclical changes in the economy, than are commodity products. Examples of specialty hardwood products include custom mantels, millwork, cabinets, and solid raised-panel doors.

Courtesy of Woodworks, Inc., Morgantown, WV

Specialty products like the oak mantel above often bring premium prices.

2. Promotion

Promotion is communication used by companies to inform customers about who they are and what they are selling. Successful promotion can stimulate product demand. Types of promotions include advertising, selling, packaging, and, to a lesser extent, public relations. Basically, promotion lets potential customers know about your products or services.

There are ample sources of promotional media from which to choose. All media types should be thoroughly investigated to see which types best reach the desired customers. For additional information on this subject, see Chapter VI, Locating Customers.

Examples of promotions include:

- Store flyers
- Direct mail
- Word-of-mouth
- Videos
- Displays in retail stores
- Displays at trade shows
- Displays in your own showroom
- Photo catalog of products
- Point-of-purchase literature
- Advertisements in newspapers, magazines, and trade journals

The packaging of a product should be used to promote as well as to protect. Because the package is highly visible, it plays an important marketing function.

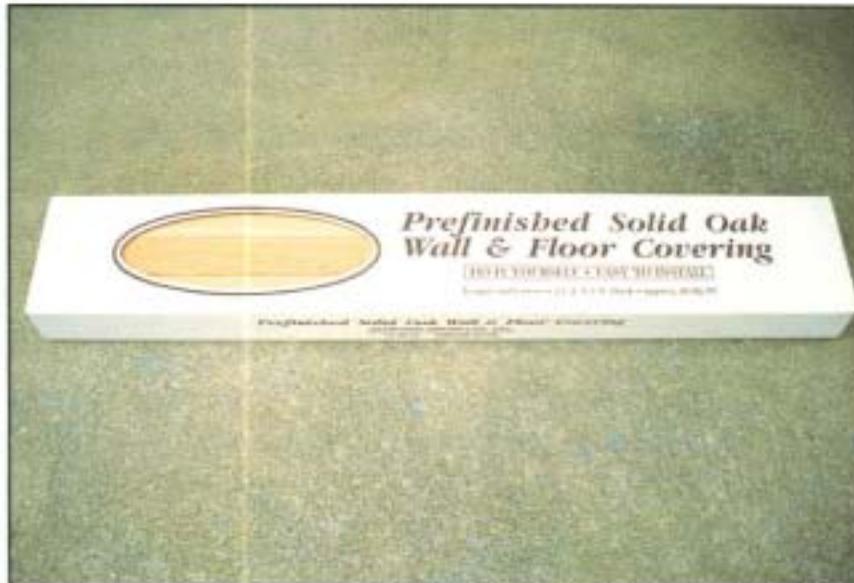

In addition to protecting your product, the package serves as a medium to:

- 1.) promote your product
- 2.) promote your company
- 3.) educate customers about your product

For the consumer market, many examples of product packaging are found in building material outlets, department stores, and home centers. Before deciding how best to package your product, determine how similar products are packaged, merchandised, and promoted. This can be accomplished through industry contacts (i.e., trade shows, journals/magazines, and packaging firms which service the industry) and by browsing through stores.

For the industrial market, an example of packaging promotion is dimension neatly stacked and shrink-wrapped on a pallet with your company logo displayed in a highly visible place. Appearance is an important factor when a buyer initially receives your products. For example, if your shipment of 5,000 oak door stiles and rails is

received by a customer in a form that does not indicate care or quality, but your competitor's product does, your customer may give the competitor preferential treatment.

Courtesy of Allwood Products, Inc., Cumberland, MD

This package not only protects the product, but visually gives the customer product information which is used when making a purchasing decision.

Product literature also plays an important marketing function. It answers questions such as: What is the product? How is it used? How do you care for it? How do you install and finish it? How do you repair it? Product literature can range from directions printed on the package, to a brochure, to a piece of plain white paper with typewritten instructions. Product literature is designed to educate customers. The more they know, the more likely they will be satisfied.

3. Price

Assessing whether a product can be made and sold at a profit is another important factor to consider when planning your company's marketing strategy. Determining price can be a difficult process and, too often, is learned through trial and error. Many factors are incorporated in developing a price. The major ones are:

Tangible factors:

- Fixed costs
- Variable costs
- Profit

Intangible factors:

- Quality
- Service
 - timely delivery
- Supply/demand factors
 - mfr's production capabilities
 - buyer's demand/need/desire
- Availability of substitutes
- Past relationships with customer
 - regular, infrequent, first time
- Credit worthiness of customer
 - customer payment habits
- Competition

Fixed costs, such as building and equipment expenses, are costs which require payment whether a product is produced or not. Variable costs, such as raw material, labor, and electrical costs, are expenses incurred in manufacturing a product and vary based on production levels. Raw material (lumber) costs are of particular importance to wood products manufacturers. For example, according to the National Dimension Manufacturers Association, raw material (lumber) can be 40 to 60 percent of the production cost to manufacturers of dimension and component parts. Profit is the

amount of monetary return desired as the reward for producing and marketing a product.

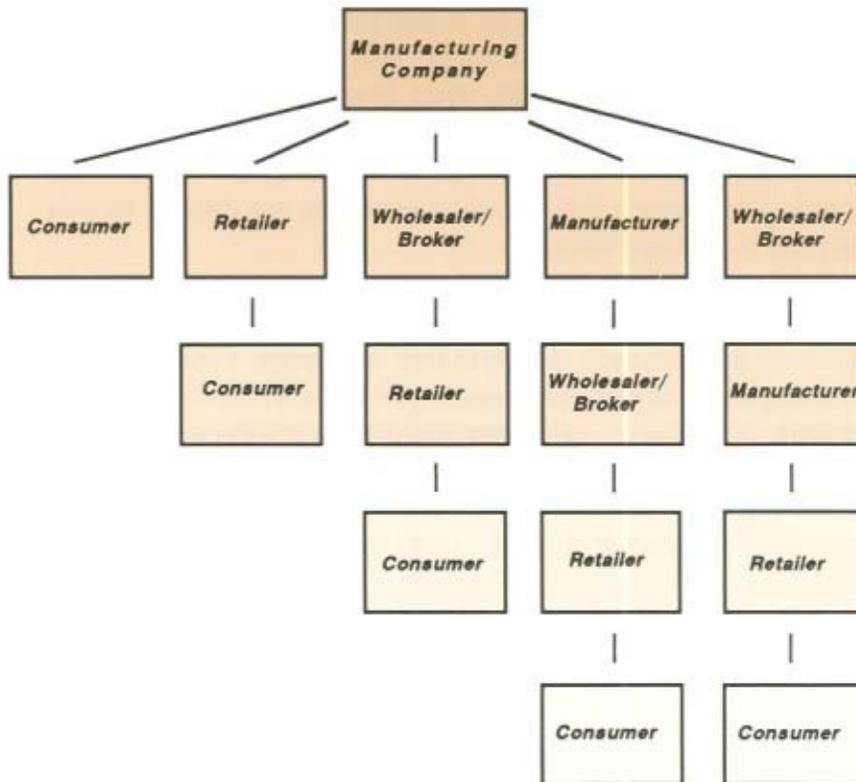

Intangible factors vary in importance depending on: company size, product line, product life cycles, and time. All of these factors are interrelated.

There are a variety of pricing strategies; however, two of the more common methods for determining selling price are competitive pricing and profit-oriented pricing. Competitive pricing is based not only on cost, but also on the selling price of similar products. Profit-oriented pricing is based on your variable and fixed costs, plus a set percentage or dollar amount (profit). For example, if the cost of producing and marketing a birdhouse is \$5, and you decide that you want to earn a \$2 profit per birdhouse, your selling price is \$7 (profit-oriented pricing). However, if your competitor is also manufacturing birdhouses and selling them for \$6.00, you may want to readjust your selling price (competitive pricing). Many companies use both methods from time to time.

An alternative to reducing your price would be to emphasize the intangible price factors. Factors such as quality and reliable service may enable you to charge a premium and simultaneously increase your market share. Often times, entering into a new market via the low-cost manufacturer is not wise because of unacceptable profit margins. Ultimately, you must decide what is an acceptable profit margin or return on investment.

4. Place(Distribution)

"Place" refers to the distribution channels used to move or transport products from your facility to your customers. The most appropriate distribution method for your company will depend on who your final customer is and which method is most efficient and cost effective in moving your product to your customers. Examples of distribution methods are retailing products directly, distributing to wholesalers or brokers, and distributing to other manufacturers.

A variety of distribution channels are available to manufacturers. Each has its advantages and disadvantages depending on your product line, size of company, and other business factors.

Usually, the closer the sales of your products are to the final consumer, the higher the price received. For example, 3/4" x 1-5/16" x 7' clear, surfaced-four-sides, oak dimension is sold to a large door manufacturer for stiles at approximately \$1.95 per piece. If that same piece of dimension is merchandised to a home center, it brings a price of approximately \$2.45 — a 26 percent increase. Why? The dimension sold to the door manufacturer has several production steps and channels of distribution to go through before it reaches the final consumer. When sold to a home center, that piece of dimension is bought by the final consumer and has no more channels of distribution to go through. The key point to remember is that even though that same piece of dimension brings a higher price sold to a home center, there are more marketing costs and effort required in this

particular market. For example, a door manufacturer may purchase a truckload of dimension at one time, whereas a home center may purchase 1/20th of a truckload. Thus, to sell a truckload to home centers, it would have to be merchandised to 20 of them (i.e., more cost, more labor, more time and probably, more headaches). Ultimately, these issues and marketing strategies are decided by you - perhaps by trial and error.

Normally, manufacturers of dimension and furniture components distribute their products directly to their customers. However, when breaking into new markets, these manufacturers often use agents or brokers. By using an agent, manufacturers utilize the agent's expertise and knowledge about the particular market, thus, minimizing the break-in period. Also, the closer the manufacturers are to their customers (physically), the more frequently they ship direct.

IV. QUALITY AND SERVICE

A company needs two additional items for success in today's business environment: quality and service. A company's knowledge and ability to produce "quality" products in conjunction with reliable service are critical for success in today's competitive marketplace.

1. Quality

Today's consumers are quality conscious. Drying defects such as splits, cracks, and checks and machining defects such as snipes and uneven milling marks are unacceptable to consumers. Many of these defects are preventable by utilizing properly dried lumber and by alleviating processing problems; which may be easier said than done. Even grain pattern and color variation affect perceptions of quality.

Courtesy of Appalachian Hardwood Center, Morgantown, WV

Drying defects are unacceptable to most customers. Utilizing lumber that is dried properly will eliminate many quality problems.

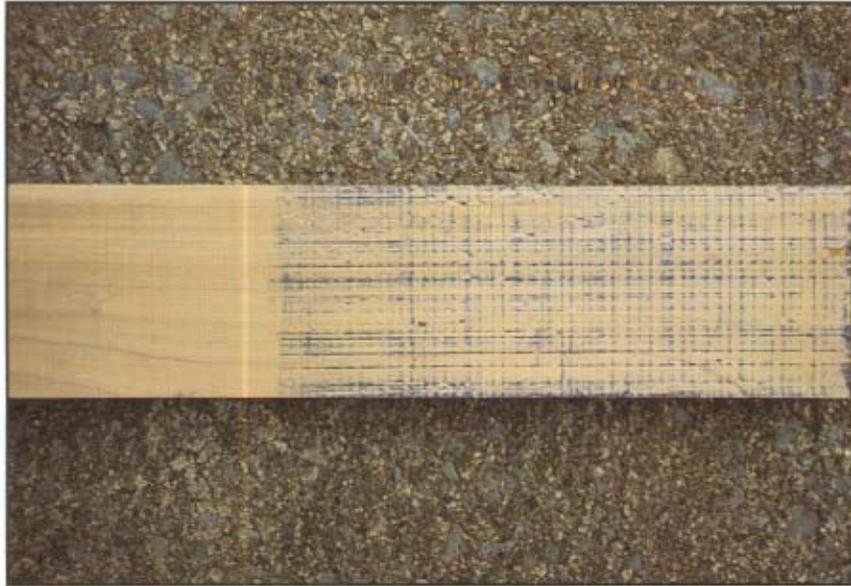

Photo by Ed Cesa

Depending on the quality-consciousness of your customers, excessive milling marks could create customer purchasing problems.

2. Service

Providing prompt service is vital to achieve and maintain customer satisfaction. Customers are frustrated when orders are not delivered on time. Manufacturers who provide fast turnaround times and prompt deliveries while maintaining quality are more likely to be profitable than firms who do not. Other important service factors are: 1) return/refund policies, 2) knowledge and competence of your salesforce, 3) knowledge and competence of your buyer's salesforce who may be reselling your products, and 4) education customers receive on your products and their uses. The importance of each factor will vary depending on the product type and your company's business philosophy.

Courtesy of Mon Do-It Center, Morgantown, WV

Educating persons who will ultimately be selling your products to final consumers is an important aspect of servicing capability. This example shows the importance of having a knowledgeable salesperson (in relation to your products) in a home center store.

V. SIMPLE MARKET RESEARCH METHODS

The next two chapters are oriented toward locating customers and/or ways to identify markets for products. Chapter VI, Locating Customers, specifically outlines methods for identifying customers. This chapter highlights simple ways to learn more about wood products markets and marketing.

Listed below are ways in which you can research and analyze potential markets for your products and/or identify potential new products for your company to manufacture. These suggestions are oriented toward awareness of consumer needs and wants.

1.) Visit local home centers, department stores, lumberyards and other retailers. Notice the types of wood products being merchandised and how they are being promoted. For example, how is hardwood paneling packaged? In what quantities is it offered? How is it promoted within the store? What customer types are targeted? Then ask yourself, "Can my products be merchandised similarly?" Also, which products are sold out? Which products does the retailer have trouble keeping in stock? Face-to-face discussions with store managers can be informative.

2.) Attend and consider exhibiting at trade shows, such as home shows. Beyond developing new sales leads, much knowledge and advice pertaining to all aspects of business operations can be obtained at these shows. The personal contacts made can be particularly rewarding, and often one will learn what similar manufacturers are actually doing. For additional information on trade shows, see Chapter VI, Section 6, Trade Shows.

3.) As mentioned in Chapter II, Marketing, one method of identifying trends and staying current and familiar with your industry is to subscribe to trade journals and magazines. To learn about the various journals and magazines which are published, check with your local bookstore or library, as well as the organizations listed in the Appendixes.

4.) Discuss ideas with individuals who are knowledgeable about markets and consumer preferences. Carpenters, remodelers, and lumberyard and home center retailers are good sources of information for your local area.

Photo by Ed Cesa

Knowledge about markets for your area is readily available, if you seek it. Professional remodelers and contractors can provide insight on local markets.

- 5.) Attend real estate open houses to determine current trends for wood products and whether or not these markets can be tapped by your company.
- 6.) Visit your local home builder association, chamber of commerce, and small business association. Individuals in these organizations may provide information about overall business operations and consumer needs and wants for wood products.
- 7.) Communicate with manufacturers of finished wood products, particularly if you are considering supplying them with dimension or component parts. These manufacturers can be located by searching through industrial and commercial directories (see pages 30-31, 33) and sometimes through state forest products directory(s) that are listed in Appendix A.

8.) Most state forestry agencies employ staff personnel who have expertise in forest products utilization and marketing. Often, they have knowledge about current marketing activity. Appendix B lists the state forestry offices located in the 20 northeastern states. When contacting these offices, ask to speak to a forest products utilization and marketing specialist.

9.) The USDA Forest Service, State & Private Forestry, Northeastern Area, employs a forest products specialist in each of its three field offices. These individuals can supply you with general marketing guidance and direct you to other knowledgeable professionals. Addresses of field offices are:

USDA Forest Service, S&PF
Concord & Mast Roads
P.O. Box 640
Durham, NH 03824-9799
Phone: 603-868-5936
FAX: 603-868-1538

USDA Forest Service, S&PF
1992 Folwell Avenue
St. Paul, MN 55108
Phone: 612-649-5244
FAX: 612-649-5285

USDA Forest Service, S&PF
180 Canfield Street
Morgantown, WV 26505
Phone: 304-285-1536
FAX: 304-285-1505

10.) Many land grant universities employ wood products extension specialists as part of their forestry/wood technology programs. These professionals can provide information pertaining to forest products. Specific expertise depends on the university's research and technology transfer emphasis. If the specialists cannot answer your questions, they usually can direct you to someone within the university system who can. Appendix C lists the land grant universities in the 20 northeastern states that employ wood products extension specialists.

11.) Forest products and marketing consulting firms are available for hire. Services they provide include market analyses, identification of marketing strategies, development of marketing plans, development of promotional strategies, etc. Generally, these firms can be identified by contacting the organizations listed in items 8, 9, and 10.

VI. LOCATING CUSTOMERS

One of the most common problems for wood products manufacturers and entrepreneurs is locating customers. A great frustration for many companies is manufacturing a quality product and then having difficulty finding customers to purchase it. Below are some suggestions for identifying potential customers.

1. Word-of-mouth

Perhaps the best way to acquire new customers is through satisfied customers. Once you have established a clientele of satisfied customers and developed a positive reputation, these people usually come back to purchase additional products as the need arises. These established clients also communicate their satisfaction to friends and neighbors. It is critical to provide first-time customers with quality products and reliable service and to continue this strategy with existing customers. Often, loyal customers buy your product, even if it is more expensive than that of your competitors, because they know they can depend on you.

2. References

As stated above, satisfied customers will come back when the need arises. Often, friendships develop with your most loyal customers, and periodically, these customers are willing to talk to prospective customers about your product line. Keeping a record (reference list) of satisfied customers and referring your potential customers to them can be an effective marketing technique.

3. Yellow Pages

One of the most useful publications available for locating customers, and for having them locate you, is the yellow pages. For example, if you are trying to contact all lumberyards or home centers in your county, consulting the yellow pages in telephone directories can be an effective method to help find them. Normally, you can request directories from your local telephone company for the areas you

want to cover. It is also possible to obtain directories for your entire state.

On the other side of the coin, a well-developed advertisement placed in the yellow pages may reward you many times over. Most people routinely use the yellow pages, especially when trying to locate products or unusual items. A well-written advertisement that briefly conveys pertinent information about your company's products, service policy, and business hours can bring you a surprising number of new customers.

Yellow page ads come in a variety of sizes and shapes. The wording of the ad is critical for it to be effective. Contact the advertising department of your local telephone directory for additional information.

4. Direct Sales

Approaching customers directly with your products is an effective marketing strategy for many companies. For example, assume you are starting a small company that manufactures hardwood flooring, paneling and molding. Your product is high-quality, but sales are low. What will you do? Will you sit by the phone and wait for it to ring, or will you try a direct sales approach similar to the following ex-

ample?

The first step for a direct sales approach is to make samples of your products. Samples of flooring and molding 4", 6", or 12" in length are adequate. For the second step, tape a business card or stamp your name, address and telephone number on the back of each sample. Next, with your samples in hand, drive to new residential construction sites and visit with contractors and builders. Give them samples and try to obtain a feel for their needs. Do the same for existing buildings, homes, and offices that are being remodeled or renovated. You probably are not going to make an immediate sale with your first contact, but at least these potential customers will know about your company for future building needs.

Courtesy of Fabery & Sons Wood Products, Uniontown, PA

Product samples with appropriate company information on them can be an effective method for leaving a long-term impression on potential customers. Samples are normally not discarded as often as brochures or other paper literature.

5. Picture catalog

Another method would be for a manufacturer to develop a picture catalog. For example, if your firm manufactures and installs kitchen cabinets, take pictures of your finished cabinets and organize them into a descriptive catalog. The catalog can be used as an effective, low-cost sales tool to attract customers.

If your firm produces products for the industrial market, a catalog of your products and facility could be useful. Pictures of your products, machinery, production line, packaging area, and office are useful when communicating with customers, especially if you are on a business trip. Often, buyers appreciate having additional knowledge about your company, especially when your facility is a thousand miles away.

6. Trade Shows

One of the most popular means of introducing products to potential customers is trade shows. Obtaining booth space at a trade show, such as a home show, enables you to promote your products to a select audience that, by its very nature, is interested in the type of products you are manufacturing. Trade shows vary depending on the type of products and markets they are oriented toward. For example, some trade shows cater to the general public (ie. home shows, mall displays); others cater to trade/industrial business professionals (ie. International Woodworking Machinery & Furniture Supply Fair, Atlanta, GA).

Local home shows are a potential option for companies manufacturing products such as flooring, paneling, molding, doors, furniture, cabinets, and other household items. To find locations and dates of home shows, contact your state home builders association (see Appendix D).

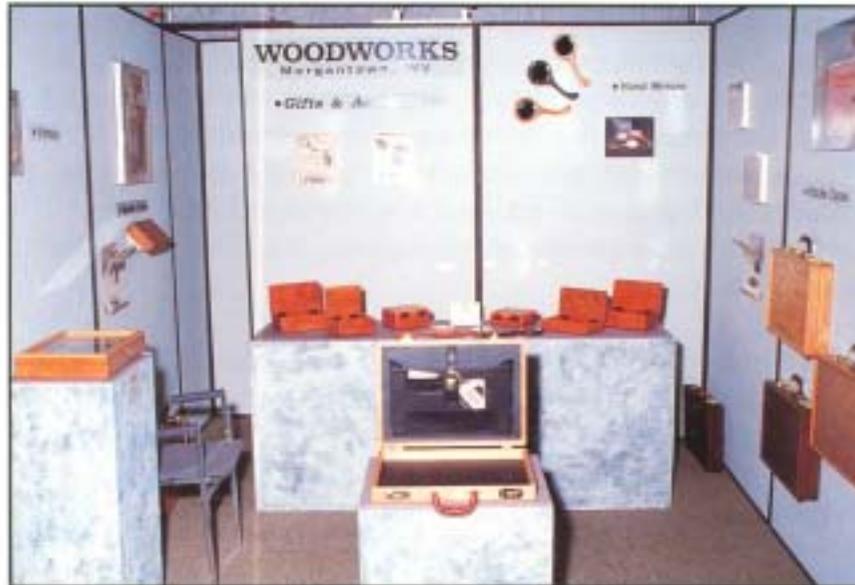

Various forest products organizations, located in the 20 northeastern states, sponsor trade shows. For a list of these shows, see Appendix E. Also, several national and regional trade shows are listed in the Appendix.

Once a decision is made to exhibit at a show, a design for an attractive booth display is needed. The design of a booth is important, because it is the first impression potential customers (attendees) have of your company and products. An example of a design is depicted on page 24.

In order to maximize show success, it is important to follow-up on show leads. This can be the difference between a potential customer and a new customer. Additionally, a follow-up letter to individuals on the attendee registration list may be productive.

For a small manufacturer, the cost of booth space, travel, and lodging may be prohibitive. By sharing booth space with another manufacturer, costs are reduced. Even if you do not exhibit, trade shows still provide many benefits. Interacting with other businesses at trade

shows generates useful contacts regarding potential customers, supplies, manufacturing technology, promotional techniques and product lines similar to your own.

Courtesy of Woodworks, Inc., Morgantown, WV

A well-designed display will attract potential customers to your booth and assist with opening lines of communication.

7. Print Advertisements

Print advertisements are an effective method for locating customers if you understand the advertising medium, its intended audience, and its advertisement costs. Advertisements may be placed in many types of printed material such as newspapers, flyers, magazines, and trade journals. An advertisement such as a classified ad placed in the daily newspaper or weekly paper, can be financially rewarding.

8. Trade Journals & Magazines

Trade journals and magazines provide some of the best marketing opportunities via print advertisements. Journals and magazines are valuable because they reach a select audience. By selecting appropriate journals and magazines for advertising your products or

services, you can get your message to those most interested.

There are journals and magazines that focus on nearly every market that exists in the United States. Once you identify several potential journals and magazines, call the advertising departments and request a media kit. The address and telephone number are normally listed on the first or second page of the magazine. The media kit contains specific information about the publication's circulation, subscribers, advertisement requirements, advertisement rates, and other marketing services. Normally, there is a three-month period between the date the journal or magazine receives an advertisement and the date it is published.

Other marketing opportunities offered by some journals and magazines include:

- 1.) Subscriber mailing lists. These lists are normally sold on a per 1000 basis. Lists can be purchased for a particular segment of subscribers (ie. by industry segment, by state, by region, etc).
- 2.) Telemarketing programs. For example, if you were planning a business trip to the west coast, certain publishers will contact specified companies you would like to visit and set up appointments for you.
- 3.) Reader services. For example, publishers will include a postcard in their journal that lists numbers which coincide with advertisements. The reader, if interested in a particular product, circles the reference number on the postcard and mails it to the publisher. The publisher in return prints mailing labels of interested readers and sends them to the manufacturer.
- 4.) Postcard packs. Some publishers periodically send their subscribers a deck of postcards. Each postcard is an advertisement for a product or service. One side carries the advertiser's message. The other side serves as a reply card with the manufacturer's name, address, and phone number.

5.) Special sections, press releases, and editorial opportunities. Certain issues of journals and magazines focus on a particular topic, market, or industry segment. Opportunities may exist to promote your product line through an article, press release, or letter to the editor in these issues. Contact the publisher for additional information.

9. Mail order

For manufacturers located in areas away from their customers, a mail order business is an option, provided your product line can be shipped relatively easily and inexpensively. Many crafts are marketed this way. The success of a mail order company often depends on determining the best means of advertising your product line. Examples of mail order business advertisements are found in many trade journals and magazines. When exploring this option, you first need to identify appropriate trade journals and magazines. Next, contact their advertising offices and request a media kit. Then follow the recommendations for advertising in journals and magazines listed previously.

Many mail order businesses develop product catalogs as part of their marketing programs. Once a company is established, a catalog of its products can be developed and distributed to potential customers upon request or through direct mailings. Mailing lists of potential customers can be generated from trade show attendee lists, telephone directories, prior inquiries, marketing companies, journals, magazines, etc.

Courtesy of Robinson Woodworks, Barryville, NY

A catalog is an effective means for mail order firms to reach customers across the country and world.

10. Customer Contact Lists

An up-to-date customer contact list can be extremely valuable, but developing and securing such a list can be frustrating. However, with ingenuity and creativity it can be developed. For many markets, specific directories of potential customers exist. For example, suppose your company wants to target do-it-yourself customers who patronize the home center market located in the New England states. Where do you find a listing of New England home centers, the types of products they merchandise, and the customer types they cater to? CHAIN STORE GUIDE Information Services, a professional marketing firm, publishes a directory called Home Center Operators and Hardware Chains which lists home centers with annual sales of one million dollars or more within all 50 states. For a wood products company targeting the home center market, this directory is invaluable. For more information, contact the company at the address listed on the following page.

CHAIN STORE GUIDE Information Services

For manufacturers who are targeting the home center market, a directory such as *The Directory of Home Centers and Hardware Chains* is a valuable marketing tool. Often, these types of directories exist, but the problem is knowing where to find them.

11. Print Advertisements on Pens, Pencils, Letterheads, Notepads, etc.

Small token items such as pens, pencils, calendars, and notepads have valuable marketing implications for many manufacturers. The range of items that you can place your name, address, telephone number and other pertinent information on is overwhelming. Various mail order companies and local office supply houses offer such products. These items can be effective marketing tools and can be distributed to potential customers during initial and subsequent meetings.

12. Industrial Directories

Industrial directories are a useful source of information when identifying potential customers because these directories list companies that manufacture all types of products. Most are divided by major industry groups, which are classified by Standard Industrial Classification (SIC) codes. SIC codes were developed for use in the classification of businesses by type of activity in which they are engaged. It is a method which the United States government uses to document statistical data on businesses. Fortunately for us, many publishers of industrial directories use SIC codes as industry classifications.

SIC 24, Lumber and Wood Products Except Furniture, and SIC 25, Furniture and Fixtures, are probably the SIC codes that will interest you most. A description of wood products SIC codes is found in Appendix F. Normally, larger wood products manufacturers, who produce products such as furniture and chairs, are included in these directories. Many of these manufacturers purchase dimension and component parts from smaller manufacturers. Conversely, you may want to consider listing your company in an industrial directory because of its potential for developing new customers.

Following is an example of how you can use industrial directories. The example centers on a company that is interested in manufacturing dimension parts, such as squares. The squares will eventually **be turned into chair legs, and the target market will be furniture and chair manufacturers.** A quick and simple marketing research method

to analyze the potential of this market would be to develop a list of chair and furniture manufacturers from selected industrial directories, such as the ones listed below. Send the companies a letter or contact them by telephone and briefly describe your company and the products you manufacture or are willing to manufacture. Assess the likelihood of those companies purchasing your products. While conducting the survey, be sure to obtain specifications from each furniture and chair manufacturer regarding required size, type, and quality of the product needed.

Industrial directories may consist of several volumes. Many college, university, and public libraries and economic development organizations have copies. Following is a list of selected industrial directories.

13. State Marketing Bulletins

An advertisement placed in a state marketing bulletin is another option. Many companies find this to be a successful marketing technique. State marketing bulletins are published by state forestry offices and are traditionally oriented toward primary-processed products; however, advertisements for secondary-processed products are becoming more common. To obtain further information concerning ad placement, or to be placed on the mailing list of a particular bulletin, see Appendix G.

Courtesy of the state forestry agencies of WI, MN, & WV

Depending on the type of product and type of markets, advertisements in state marketing bulletins can be an effective low-cost marketing technique.

14. State Forest Products Directories

Most state forestry offices maintain forest products directories that list manufacturers of various wood products. These directories are frequently distributed to potential customers. For example, state agencies, representing their forest products industries at trade shows, distribute these directories to show attendees. Consequently, it is wise to list your company in your state directory. Appendix A lists forest products directories published by state, as well as the addresses and phone numbers of the publishing agency.

Having your company listed in your state's forest products directory is another way to increase your exposure to potential customers. Also, the directory may provide you with a list of potential customers.

15. Commercial Forest Products Directories

A variety of commercial forest products directories exists, with each varying in style, content, and organization. All have valuable information about the forest products industry. They can be used as a source for identifying customers.

Following is a list of selected commercial directories.

Directory of the Forest Products Industry

Miller Freeman Publications
500 Howard Street
San Francisco, CA 94105
Phone: 415-905-2200

16. State Forest Products Associations & Related Groups

Most states have at least one association or wood-interest group that represents or provides assistance to the forest products industry. Contact these groups to understand how they operate, their potential benefit to you, and your potential benefit to them. Appendix H lists forest products associations and related groups that may assist you with your company's marketing program and/or general operation.

17. Trade Associations

Trade associations are generally comprised of a group of manufacturers specializing in a particular segment of the industry. For example, the National Oak Flooring Manufacturers Association is comprised of members who primarily produce oak flooring. Trade associations generally market their members' products and services through various promotional and educational programs including trade shows, newsletters, workshops, advertisements, etc. They represent their members on legal matters and environmental concerns, establish and maintain product standards and specifications, and collect and distribute economic trend and market information to their members. Your company may wish to consider joining a trade association. Appendix I lists associations which represents manufacturer of secondary-processed wood products.

18. Seminars & Workshops

Forest products associations, industry groups, government agencies, and universities periodically conduct seminars and workshops on various segments of the forest products industry. Many of the seminars and workshops are marketing oriented and often provide information on potential customers and effective ways of reaching these customers. These workshops are advertised in state marketing bulletins (see Appendix G), by direct mail, and by word-of-mouth. Often, manufacturers miss many opportunities by not attending these workshops. People are busy and money is usually tight, but the time and money spent at a quality workshop is time and money well spent. Not only do you gain from the knowledge acquired, but also from the contacts. Workshops in the 20 northeastern states range from log and lumber grading, to kiln drying, to processing and manufacturing, to marketing and exporting, with everything in between. Usually your state's forest products utilization and marketing staffs (see Appendix B) and wood products extension specialists (see Appendix C) are familiar with upcoming workshops in your area.

VII. CASE STUDY: Sunset Hardwood Company

The following case study is an example of how one might use the information and ideas in this guide in the development of a marketing plan.

Sunset Hardwood Flooring Company manufactured strip and plank flooring for over 40 years. Back in the 1950's, markets were exceptional, and buyers practically knocked the company's doors down to buy their strip flooring. As wall-to-wall carpeting began to compete strongly against hardwood flooring, sales started to shrink.

Today, the company produces only a tenth of the volume it did during the heydays of the 50's. Only a few employees are needed to maintain the operation. For the last 20 years, the company's marketing strategy was to sit by the telephone and wait for orders.

When the owner of the company decided to retire, he sold the struggling company to a young businessman who was familiar with marketing and homeowners' tastes and preferences for interior wood products. Although the new owner knew very little about manufacturing flooring, the employees knew quite well how to manufacture top-quality flooring. By combining the strength of the existing workforce and the new owner's marketing knowledge, the company made some major changes. What do you think they were? Think what you would have done if you were the new owner.

The first step was to add a new product line. It was basically V-grooved plank flooring, but instead of marketing it as a floor covering, it was marketed as a wall paneling. In particular, the new owner realized that the housing boom in the adjacent metropolitan area had new homeowners who wanted a distinct character or flavor for their homes. He identified this need by visiting with new residential contractors and carpenters and homeowners, discussing their needs and wants as well as any possible opportunities for his company to meet their needs.

From his market assessment, he developed a wainscoting product from the existing flooring product line in lengths of 32 and 36 inches. The company also developed a panel cap molding that sat nicely

on top of the wainscoting. The panel cap served as both a chair rail and a decorative covering for the top end of the wainscoting.

The new owner realized that most of these homeowners were unaware of his company's new product line; consequently, he developed a marketing program geared at increasing consumer awareness. The marketing program is outlined below:

1.) The Product

- a. Two species: red and white oak (species currently being manufactured into strip and plank flooring)
- b. Two grades: clear and character marked
- c. Lengths: 32" and 36"
- d. Widths: random (a combination of the following widths; 2", 3", 4", 5"); same width (all 2" or 3", etc.)
- e. Other characteristics: wainscot was sanded, edges were beveled
- f. Developed a panel cap to fit on top of the wainscot (red and white oak)

2.) Pricing Scheme

Because the wainscot product was a specialty item, not a commodity item, the pricing strategy followed accordingly.

- a. For the clear grade, the price was:
 - Random width: 30% higher than the standard flooring price
 - Specific width: 40% higher than the standard flooring price
- b. For the character-marked grade, the price was:
 - Random width: 20% higher than standard flooring
 - Specific width: 30% higher than standard flooring
- c. For the panel cap, the price was:
 - The same as baseboard molding sold as a complementary product with the flooring

3.) Promotional Strategy

- a. Samples: The company produced 24" x 32" wainscot samples (with the panel cap attached) in red and white oak, clear and character-marked grades, stained and finished. A variety of stains was used to demonstrate the color effect. The backs of the samples were stamped with the company logo, address, phone and FAX numbers, as well as the grade, type of stain, and finish. The displays were used to educate and entice new residential contractors, remodelers, and homeowners to purchase wainscot.
- b. Informational brochure: The company developed a brochure on the characteristics and quality appeal of their wainscoting that included: suggestions for what types of rooms to install it in, installation instructions, finishing instructions, and instructions for care after installation. The informational brochure served to educate homeowners on the quality of the wainscoting and how to install it. It also served as a handout for professional contractors to distribute to potential customers.
- c. Office display: Wainscoting in both red and white oak, clear and character-marked grades, was installed in the company's offices providing customers a firsthand look at the company's wainscot product line.
- d. Photo display: The company organized a series of photos of residential homes with the company's wainscot product installed.
- e. Personnel: The company allocated 20 percent of the existing salesperson's time to promoting and marketing the new product line.

4.) Distribution

The company had no trucks. They shipped their products via commercial trucking and continued that method for wainscot shipments. Shipping charges were paid by the company for

orders of \$1000 or more.

The marketing program was two-tiered. It was directed to both professional contractors, as well as do-it-yourself homeowners. An advantage was that once contractors started using the company's wainscot and their customers were satisfied, these contractors recommended it to other homeowners. A second advantage was the company also reached the final customers, who may want to install it themselves later in other areas of their house.

Armed with a well-thought-out product line, pricing scheme, promotional strategy, and a planned distribution system, the company salesforce hit the road. Samples were given to professional contractors operating in the metropolitan area and advertisements were run in the local newspapers and yellow pages. The new product line was also promoted to the company's existing flooring customers. Because the new product line required little additional investment in the manufacturing operation, risk was minimized.

The company's first year sales goal was \$75,000 while the sales goals for the second and third years were \$140,000 and \$270,000, respectively. How do you think they did? Would you have done anything differently?

VIII. EXPORTING

The export market for secondary-processed wood products is growing and varies depending upon the product, country, trade policies, and various other factors. Export marketing initially sounds frightening and unappealing to many manufacturers and entrepreneurs; however, there are many manufacturers who successfully export their products. As with any new potential market, it needs to be studied, researched, analyzed, and approached with caution. The purpose of this chapter is to direct you to sources of exporting knowledge and assistance.

To test this market initially, consider working with an *export agent* or an *export broker*. These people are familiar with export documentation, payment methods, and specific country markets. Normally, *export agents* charge a commission or fee for their services and will generally handle the marketing, distribution and documentation of your products. For a manufacturer venturing into the export market, working with an export agent is a logical choice. However, the agent controls much of your marketing.

Export brokers purchase products directly from you and resell them to foreign customers. They minimize your risk, but your total return is reduced because the broker charges a commission to do the work required to get your product overseas.

Both of these strategies -- working with an agent or a broker -- are options for entering into the export arena. Either way, you can learn what foreign customers want or require, and they get to know your products and company. However, utilizing these export marketing strategies indefinitely may cost you additional exporting opportunities.

In addition to using export agents and export brokers, other ways to enter into the export market exist. For example, the U.S. Department of Commerce, International Trade Administration (ITA) offers numerous export-oriented programs. These include:

- Export Counseling
- Export Video Tapes
- Trade Opportunities Program
- Commercial News USA
- Agent/Distributor Service
- World Traders Data Reports
- Matchmaker Events
- Overseas Trade Missions
- Overseas Catalog and Video/Catalog Shows
- Foreign Buyer Program
- Overseas Trade Fairs
- Custom Statistical Service

For detailed information about specific programs, contact the ITA office nearest you by consulting your telephone directory under U.S. Government or contact the Washington, D.C. office:

U.S. Department of Commerce
International Trade Administration
14th Street & Constitution Avenue, NW
Washington, D.C. 20230
1-800-USA-TRADE or 202-377-0375
(872-8723)
FAX: 202-377-4473

The 1-800-USA-TRADE number can be used as a "one-stop" information source on export programs offered by most federal agencies.

The Small Business Administration (SBA) also offers exporting programs for small businesses. Some of their programs are:

- Export Counseling
- Export Training
- Export Information System
- Matchmaker Events
- Service Corps of Retired Executives (SCORE)
- Small Business Development Centers

Many of these programs are administered through the Office of International Trade. Information concerning these programs can be obtained by contacting the SBA office nearest you. Consult your telephone directory under U.S. Government or contact the Washington D.C. office:

***Small Business Administration
Office of International Trade***

6th Floor
409 Third Street, SW
Washington, D.C. 20416
Phone: 202-205-6720
FAX: 202-205-7272

The U.S. Department of Agriculture, Foreign Agricultural Service (FAS) provides export services such as:

- Export Counseling
- Foreign Buyer Lists
- Trade Leads
- Foreign Market Information
- Technical Assistance
- Wood Products: International Trade in Foreign Markets
(quarterly)

FAS has Agricultural Trade Offices (ATOs) located in U.S. Embassies. The ATOs conduct activities such as working to develop and expand markets for U.S. agricultural products. The ATO's addresses are listed in the FAS Overseas Directory.

FAS also developed, "A Guide to Exporting Solid Wood Products," (USDA, FAS, FPD, AH No. 662, July 1990). This guide is designed to assist U.S. wood products manufacturers with developing successful export marketing strategies. It includes methods to obtain accurate and up-to-date export marketing information so that the production, scheduling, and shipping of U.S. wood products can be done profitably. To obtain a copy of the handbook or to obtain additional information about FAS programs, contact:

***USDA Foreign Agricultural Service
Forest Products Division,***

Room 4647-S
14th Street & Independence Avenue, SW
Washington, DC 20250
Phone: 202-720-0638
FAX: 202-720-8461

The USDA Forest Service's Forestry Sciences Laboratory located in Princeton, WV, has an extensive data base of statistical trade information and analyses targeted toward most major domestic and international hardwood product markets. Laboratory staff can be contacted at:

***Northeastern Forest Experiment Station
Forestry Sciences Laboratory***

Route 2, Box 562-B, Gardner Area
Princeton, WV 24740
Phone: 304-425-8108
FAX: 304-425-1476

Most states provide exporting assistance in one form or another. Normally, manufacturers can obtain assistance through their **state commerce/international trade department** (Appendix J) and/or their **state forestry office** (Appendix B). Many states have regional or local export assistance programs, too. The location and contact persons for these programs can be obtained by contacting the state export assistance agencies listed in Appendix J.

The Appalachian Export Center for Hardwoods (APEX) has programs designed to increase the quality and value of hardwood exports from the Appalachian region.

The two programs most pertinent to manufacturers are:

1. Outreach: trade assistance, workshops, technical publications
2. Research: international market analyses, requirements and opportunities

Additionally, APEX publishes a newsletter which includes current export information, an international report, listings of trade leads and trade shows. APEX also publishes "Statistical Quarterly," which lists quarterly export figures of hardwood products in terms of value, quantity, species, and country. Other APEX publications include country profiles and research briefs on exporting and export markets. For information on these programs, contact:

Appalachian Export Center for Hardwoods
West Virginia University
P.O. Box 6061
Morgantown, WV 26506-6061
Phone: 304-293-7577
FAX: 304-293-7579

The American Hardwood Export Council (AHEC) is the leading international trade association for the U.S. hardwood industry, representing the committed exporters among U.S. hardwood companies and all the major U.S. hardwood product trade associations. Programs and services which AHEC provides to its members include:

Market Development Programs & Market Intelligence
Trade Missions, Fairs, and Exhibitions
AHEC Membership Directory
Technical Information and Seminars
Promotional Assistance

For additional information, contact:

American Hardwood Export Council
1250 Connecticut Avenue N.W., Suite 200
Washington, D.C. 20036
Phone: 202-463-2720
FAX: 202-463-2785

IX. FINANCING

Cash flow problems periodically plague wood products manufacturers and entrepreneurs because a significant portion of a company's cash is often tied-up in inventory or accounts receivable. It is wise to plan ahead for expected and unexpected cash needs and cash flow concerns. Several sources of capital exist from both public and private concerns.

Federal and state governments have programs which provide financial assistance to businesses. Normally, a tremendous amount of lead time is needed for processing these types of loans, and they may require you to release company information that you may not want to release. However, these sources have proved to be useful to some companies seeking funding for certain types of ventures.

Normally, obtaining a government loan will require the same amount of effort and paperwork that is required for a private loan. Consequently, it is wise to plan ahead and have a business plan developed which includes cash flows, market analyses and sales projections for at least three years. Letters of commitment from customers to purchase your products are valuable, also.

The U.S. Small Business Administration (SBA) has programs which provide businesses with loan assistance. By law, a business must first seek financing from a bank or other lending institution before it is eligible for SBA loan assistance. SBA offers two basic types of loans: guaranteed loans and direct loans. A guaranteed loan is usually made by a private lender such as a bank and is guaranteed up to 90% by SBA. Direct loans are available only to businesses unable to secure an SBA guaranteed loan. Direct loans are extremely hard to secure.

To obtain further information on SBA loans, contact the SBA office nearest you or the Washington, D.C., office at:

***Small Business Administration
Office of Financial Assistance***

409 Third Street, SW
Washington, D.C. 20416
Phone: 202-205-6490
FAX: 202-205-7064

Most state commerce/development departments offer some form of potential financial assistance for certain business ventures. To learn more about the programs offered within your state, contact the appropriate agency list in Appendix K. These contacts may be able to direct you to private lending sources also.

X. APPENDIXES

Additional sources of information for secondary wood products manufacturers and entrepreneurs located in the 20 northeastern states are listed in the following appendixes. Every feasible effort was taken to ensure the correctness of the listed sources. If an agency/organization was omitted, it was unintentional. The Utilization and Marketing Supervisors from the State Forestry Offices in the 20 northeastern states provided the majority of the information listed in this section.

Appendix A: State Forest Products Directories

Most state forestry agencies publish some type of forest products directory(s). Traditionally, these directories have been oriented toward primary processing. Listed below are directories which include manufacturers of secondary wood products and primary wood products. As mentioned in the text, these agencies promote their forest products industry by distributing directory(s) upon request. The information listed about manufacturers will vary from state to state. To obtain copies of the directories or to have your company listed in your state's directory(s), contact the appropriate agency.

Appendix F. Wood Products Standard Industrial Classification Codes

Probably the most useful standard industrial classification (SIC) codes for manufacturers and entrepreneurs of secondary-processed wood products are SIC Group 24, Lumber & Wood Products, except Furniture; and SIC Group 25, Furniture & Fixtures. Listed below are the 4 digit SIC codes for the industry segments of the two groups.

Major SIC Group 24. LUMBER & WOOD PRODUCTS, EXCEPT FURNITURE

241 LOGGING CAMPS AND LOGGING CONTRACTORS

2411 Logging camps and logging contractors

242 SAWMILLS AND PLANING MILLS

2421 Sawmills and planing mills, general

2426 Hardwood dimension and flooring mills

2429 Special product sawmills, not elsewhere classified

243 MILLWORK, VENEER, PLYWOOD, AND STRUCTURAL WOOD PRODUCTS

2431 Millwork plants

2432 Veneer and plywood plants

2434 Wood kitchen cabinets

2435 Hardwood veneer and plywood

2436 Softwood veneer and plywood

2439 Structural wood members, not elsewhere classified

244 WOODEN CONTAINERS

2441 Nailed and lock corner wood boxes and shooks

2448 Wood pallets and skids

2449 Wood containers, not elsewhere classified

245 WOOD BUILDINGS AND MOBILE HOMES

2451 Mobile homes

2452 Prefabricated wood buildings

249 MISCELLANEOUS WOOD PRODUCTS

- 2491 Wood preserving

Appendix G. State Marketing Bulletins

As a service to the wood products industry, some state forestry offices publish marketing bulletins. These bulletins vary from state to state in content, size, publishing frequency, and circulation. Generally, these bulletins list products and services for sale or wanted, and often contain articles on subjects affecting the industry and lists of upcoming workshops and events.

Appendix J: Exporting Assistance - State Agencies

Many state forestry agencies listed in Appendix B and many extension programs listed in Appendix C provide export assistance. Various other agencies and organizations within each state offer exporting assistance to manufacturers. Most states have a division within their commerce/economic development departments that provide exporting assistance. Some state agencies have trade offices located in key markets throughout the world. The services and programs provided by these state agencies vary. To learn more about your state's export services and activities, contact the appropriate agency listed below.
